MULTI-VENDOR

Newton RDP provides bank's top management with a direct supervising access to information on ATMs operations, through a high-end observation deck.

Completing the Newton tool force of applications for integrated banking automation, Newton RDP enables users to achieve management inclusiveness.

HYPER-DESK

Newton RDP is a real time monitoring dashboard to check the operational performances of the ATMs system, from fleet overview down to single machines. Efficiency and functionality standards of the network can be monitored with an accurate level of details, also from mobile, thanks to Newton RDP responsive design.

EASY ACCESS DETAILS

Easily monitor operations of peripheral devices and support network capabilities, in terms of transactions, cash balance overview, devices functioning status, system quality, reply-time of system monitoring (system back to work), Mean Time To Repair (MTTR), Service-Level Agreement (SLA) and related ATM model performance costs, and Mean Time Between Failures (MTBF). Thanks to an effectively designed user interface, information is filtered and displayed in an intuitive format that grants immediate access to data, at different levels.

ANALYSIS CONTINUITY

Newton RDP supplies company managers with full operative reports to track, compare and implement key decisions. The new geolocalisation feature adds up to the level of possible performance investigations.

Newton RDP is also fully accessible by mobile, thanks to its responsive design.
